Strategic Research Program in Epidemiology

Applied statistical workshop

With Prof. Matteo Bottai

Aim: This workshop aims to discuss key issues and review updated statistical methods for data analysis on quantitative measurements, and to solve practical problems that researchers commonly encounter in the data analysis.

Date: Monday December 3, 2012

Time: 9.45 – 13.30

Coffee will be served at 9.45-10.00 .Lunch is included.

Location: Conference room on 8th floor, Aging Research Center (ARC), Gävlegatan 16.

Background: This workshop focuses on a selected set of estimation issues that we generally encounter for quantitative measurements in data analysis. During this activity, participants may share experiences and views on data quality, collection, and analysis. The experts may provide a review and comments on new statistical tools, methodologies and concepts of statistics/indicators. Such workshop is an important platform to ensure proper methods and interpretation that are applied in data analysis. This workshop also promotes cooperation and collaboration among different epidemiological units within KI.
